Mobile: +91-9560939353

ABOUT

Senior Software Engineer with 6.5+ years of experience building scalable backend, data, and ML platforms. Specialized in distributed systems, real-time streaming, and cloud-native architectures using Kafka, Flink, and GCP. Strong in problem-solving, data structures, systems and database design with a track record of building cost-efficient platforms. Experienced in owning end-to-end systems, automating CI/CD, and mentoring engineers.

EDUCATION

- **Indian Institute of Technology(IIT), Delhi**
B.Tech in Engineering Physics and Minor area in Business Management 2015 – 2019

EXPERIENCE

- **Confluent** Remote, India
Sept 2023 - Present
Senior Software Engineer
 - **Built a low-cost, configuration-driven ingestion framework** (webhooks + API exporters) on GCP to ingest data into Confluent Cloud, enabling easy onboarding of multiple sources including Zendesk, Jira, CommonRoom, Quartr and Crossbeam and designed for seamless expansion to many future integrations.
 - **Developed** numerous **Flink** pipelines that power the entire backend of Customer & Account Intelligence Hub—a centralized platform providing insights into customer & account data for sales and field teams.
 - **Built and managed** cloud infrastructure on GCP and Confluent Cloud using **Terraform**, developed custom Kafka source connector(BYOC) & integrated managed connectors for data synchronization.
 - **Enhanced data warehouse efficiency** by automating the export and deletion of unused tables and inefficient pipelines from BigQuery to Google Cloud Storage, resulting in monthly savings of \$5000.
 - Built and automated an end-to-end **MLOps platform** for data science teams (data load → training → evaluation → serving), with CI/CD pipeline deploying production-ready models in a single PR merge.
 - Designed and built **account intelligence platform** that automatically collects, synthesizes, and analyzes data about customer accounts to provide real-time, actionable insights for various business roles.
- **Jio Platforms Limited - Jio Health** Hyderabad, India
July 2019 - Aug 2023
Software Development Engineer
 - **Back-end:** Wrote numerous scalable microservices in Python, secured them using different cryptographic algorithms, built CI/CD pipeline on Azure DevOps and deployed Dockerized services on Kubernetes Clusters.
 - **Web scraping using Selenium and BeautifulSoup:** Wrote statistics service for Covid-19 cases which automated the scraping of real time data(**1M+ DAUs**); Wrote extractors and processors which automated the extraction of data (grocery, medicine, YouTube videos) from various websites and ingest that in backend platform.
 - **Centralised Knowledge Platform:** Worked on to build an extensive knowledge graph and data processing infrastructure at scale to power comprehensive and accurate data science services.
 - **Data Platform:** Built Data pipelines which has real time **event-driven architecture** and integrated Jio Big Data Lake(JBDL) for collection of all the user generated events(**Processing 1M+ events/day**); This PII stripped data is used for Analytics, research & training AI/ML models.
 - **Vault:** Integrated Vault(Hashicorp) with Consul as backend storage for managing and securing JioHealth secrets
 - **Frontend:** Built web and mobile frontends using React.js and React Native for the Machli app (8,000+ users; award-winning), Jio's COVID-19 portal (serving 2M+ daily active users), and a symptom-triage chatbot.
 - **ABDM:** Led the integration of JioHealthHub with ABDM; Designed the architecture for integration; Developed various scalable microservices/components.

INTERNSHIP

- **GNY Capital Ltd**

Noida, India

Technical Analyst

May 2018 - July 2018

- Developed a **dashboard to automate** the fund research and analysis; a **monitoring system** for the core portfolio of the company; **algorithms** to prepare portfolio and index as per the requirement.
- **Developed** Python scripts for data extraction using Bloomberg extension for large number of tickers.
- **Developed** scripts to **automate** the research & analysis of funds to categorise them in green, yellow, red.
- Performance appreciated by bonus and **letter of recommendation** from the managing director.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, Java
- **Technologies:** Confluent Cloud, Kafka, Flink, Terraform, Google Cloud Platform, BigQuery, SQL, MongoDB, Docker, Kubernetes, React.js, React Native, Django, Flask, FastAPI, BeautifulSoup, Selenium, Git, Azure DevOps

SCHOLASTIC ACHIEVEMENTS

- **Felicited by Chief Minister of Uttar Pradesh:** for clearing JEE Advanced (Top 3 from rural background)
- **Super-30, Managed by Mr. Anand Kumar:** Among top 30 selected from 10000+ students all over the India.
- **Jawahar Navodaya Vidyalaya(JNV):** Selected through a highly competitive district-level entrance exam (ranked among 80 selected out of 7,000+ applicants); fully residential, merit-based school funded by the Govt. of India.
- **Minor Degree:** Completed Minor in Business Management offered by DMS, IIT Delhi along with my B.Tech.
- **Award:** Honoured with Shiksha Gaurav Award in Bihar Pradeshik Marawari Sammelan, 2014
